ACCESS METHOD

A touch-sensitive numeric keypad controls the opening of both the **outer gate** and the entrance door of each individual **apartment**.

To activate the opening, enter your personal 5-digit code and push the door to open.

The number of the respective apartment (es. **Appartamento 1**) is displayed on each keypad in green lettering.

WARNING:

- In case of an error in entering the code, wait a few seconds and try again.
- Pressing the button with the bell symbol rings the doorbell of the apartment.
- **To open the gate from the inside, press the white button located on the inside of the entrance column.**
- For pedestrian entry, command the gate to open, wait until enough space has been created for passage, and then press the white button again. The gate will remain open for approximately 30 seconds before closing automatically.
